

## SYSTEM WIDE CHLORINATION FOR GREAT OAKS WATER COMPANY

In an effort to provide an extra level of protection from bacteria, Great Oaks Water Company (GOWC) once again with the guidance and approval of the State Water Resources Control Board (SWRCB) Division of Drinking Water (DDW), will begin System Wide Chlorination July 20, 2022. The concentration of chlorine will be very low. The range will be .10 mg per liter, to .20 mg per liter. This concentration is very similar to the chlorine concentration at some locations currently in our system. The water, with the addition of chlorine, is safe to drink, wash with, and cook with. The low concentration of chlorine, will provide the necessary protection from bacteria while having a minimum effect on the taste and smell of the water. If you have any questions, please contact me: Mike Carey the Water Quality Specialist for GOWC phone: 408-227-9540 email: [mcarey@greatoakswater.com](mailto:mcarey@greatoakswater.com)
